

EXERCISE 3, EMGO 02 2

Salary Band	[0,10)	[10,20)	[20,35]	[35,50]	[50,100]	[100,200]
Number of Individuals	35	50	81	20	10	4
Relative Frequencies	0.175	0.250	0.405	0.100	0.050	0.020
Frequency Densities	0.0175	0.025	0.027	0.00667	0.001	0.0002
Mid-Points	5	15	27.5	42.5	75	150

Calculation of approximated median

EXERCISE 3, EMGO DE 2

Salary Band	[0,10)	[10,20)	[20,35]	[35,50]	[50,100]	[100,200]
Number of Individuals	35	50	81	20	10	4
Relative Frequencies	0.175	0.250	0.405	0.100	0.050	0.020
Frequency Densities	0.0175	0.025	0.027	0.00667	0.001	0.0002
Mid-Points	5	15	27.5	42.5	75	150

Calculation of 1st QUANTILE (approximation)

The red striped area should be 0.25 by definition of Q_1 .

Hence the green area should be $0.25 - 0.175 = 0.075$

Hence the basis of the green rectangle, called \perp area of first bar

x should be $\frac{0.075}{0.025} = 3$.

Hence $Q_1 = 10 + 3 = 13$.

Similarly Median = 22.75 and $Q_2 = 32.04$
